String Replacement

This instrument has been equipped with the finest Vinci Strings made in the USA. We recommend replacing your strings with the following Vinci Strings as well.

R010 steel string

800 XL phosphor bronze strings:
.010, .014, .023, .030, .037, .047

R020 classical

552 classical nylon strings:
.028, .032, .040 treble
.028, .032, .040 wound

Changing strings: Strings should be replaced one at a time to maintain equal bridge and neck tension at all times. With ball end seated in the bridge, bring the string through the nut and then through the machine head hole. Take the excess string that extends beyond the tuners and bring it back towards the nut and beneath the string. Pull the string upward and begin turning the machine head. The first few windings will wrap the string snug against itself. Trim the excess off with wire cutters. Take care to protect your eyes during the string changing process.
